## **Introduction**

The District Improvement Plan (DIP) has been designed to provide schools and districts with a common planning template that addresses student learning and system needs that have been identified through the schools' Comprehensive Needs Assessment.

# **Improvement Plan Stakeholder Involvement**

## **Introduction**

The responses should be brief, descriptive, and appropriate for the specific section. It is recommended that the responses are written offline and then transferred into the sections below.

## **Improvement Planning Process**

### Improvement Planning Process

**Describe the process used to engage a variety of stakeholders in the development of the institution's improvement plan. Include information on how stakeholders were selected and informed of their roles, and how meetings were scheduled to accommodate them.**

In an ideal situation, all of our stakeholders are present but with the various issues that transpire we use multiple modalities to communicate our improvement towards our district's goals, activities and strategies. Our school improvement plan is a compilation of academic data analysis and perception data derived from surveys. After evaluation of programs, various meetings and distribution of surveys, the revisions of the plan begin with the leaders of the team which consists of teachers, support staff, administration and community members. Monthly School Improvement meetings are scheduled along with parent meetings to collect feedback from parents and staff, both positive and negative. For members who weren't in attendance, emails and newsletters are sent to inform them of decisions made and what action steps were planned to address areas of strengths and weaknesses.

**Describe the representations from stakeholder groups that participated in the development of the improvement plan and their responsibilities in this process.**

CCA District plans for monthly leadership meetings, instructional coach meetings, SIP meetings ESL meetings, parent meetings and board meetings. During these meetings input is welcomed and encouraged from all parties. Active members provide data, suggestions and action plans to monitor the DIP and the school improvement plans. Agendas are created and sign in sheets are evidence of the collaboration of team members.

**Explain how the final improvement plan was communicated to all stakeholders, and the method and frequency in which stakeholders receive information on its progress.**

In the earlier section, the teams that were mentioned, such as the leadership team, instructional coach team, district school improvement team and ESL are informed from their leads on the team on the necessary changes made and the expectations of the revised SIP/DIP. The board members are informed through the organizational meetings and parents are often notified through PowerSchool, School Reach, newsletters and parent meetings.

### Measurable Objective 1:

85% of Pre-K, Kindergarten, First, Second, Third, Fourth, Fifth, Sixth, Seventh, Eighth, Ninth, Tenth, Eleventh, Twelfth, Postsecondary, Adult, Ungraded and All grade Black or African-American, Asian, Bottom 25%, Bottom 30%, White, Economically Disadvantaged, Free/Reduced Lunch, Gifted and Talented, Hispanic or Latino, Improvement from 10th to 12th Grade, Improvement from 8th to 10th Grade, Students with Disabilities, English Learners, Two or More Races, American Indian or Alaska Native, Native Hawaiian or Other Pacific Islander and Top 75% students will demonstrate a proficiency of 80% or higher in English Language Arts by 06/30/2024 as measured by the student's M-step (or equivalent state assessment), MME, SAT, and NWEA scores.

### Strategy 1:

Alignment of curriculum, instruction, and assessment - The Quality School Improvement Plan (QSIP) has been revised to convey the intent of the leadership and guides the development, scope, alignment and evaluation of the written curriculum in all content areas. It also ensures quality control of the designed and delivered curriculum. The district will continue to implement the QSIP which will assist in aligning the curriculum to the common core state standards, structure the pacing guides and analyze the district assessment data. It also ensures quality control of the designed and delivered curriculum in conjunction with Saginaw Valley State University.

## District Improvement Plan

Cesar Chavez Academy

<p>In order to create accountability for students, teachers, administrators and the school, all staff will assist in the development of curriculum, cross-curricular units, lessons and activities that are aligned to the Common Core State Standards (CCSS), This will be accomplished by using a rigorous lesson planning model. This model will be used to translate the standards into learning. By focusing on continuous improvement, the staff will employ exemplary practices that will increase learning and achievement. Teacher will develop plans with key components that improve student learning through documentation of essential questions, Marzano's strategies, formative and summative elements, sequence of instruction and higher order thinking skills.</p> <p>The staff will:</p> <ul style="list-style-type: none"> <li>- Clarify/Interpret the expectations of the CCSS in terms of knowledge, understanding, and skills.</li> <li>- Develop common assessments that will provide evidence of student learning.</li> <li>- Develop student learning maps that provide a focus for teacher planning and clearly communicate the expected learning to students.</li> <li>- Develop lessons and units that incorporate research-based and exemplary practices to ensure that students learn what is expected.</li> </ul> <p>In order for the staff to ensure that classroom lessons, assessments, and instruction are driven by the common core state standards, the staff will create student learning maps. These maps will be derived from the academy's standards driven curriculum. This process will clarify the standards into terms of what students need to know and be able to do in order to be successful at their grade level. The development of the student learning maps will provide a consistent access to the standards and the curriculum throughout the school. This activity will be monitored by the instructional coach, district coordinator of student learning, and the school leader and will be evidenced by the submission of student learning maps, along with lesson plans that follow them. This will require an online observation tool/app to record observations, transmit feedback, and generate data.</p> <p>Schools: All Schools</p>	Direct Instruction, Monitor	Tier 1	Implement	08/16/2017	06/22/2018	\$6000	Title I Part A	Instruction staff, instructional coaches, school leaders, district coordinator of student learning

## District Improvement Plan

Cesar Chavez Academy

<p>Instructional coaches, District ELL coaches and the District Coordinator for Student Learning will ensure staff engages in effective sustained professional learning experiences by using data and working collaboratively with the district administrative team to support the QSIP. In order to accomplish this, the school leaders, instructional coaches, and district coordinator for student learning will participate in training that focus on key practices for effective school leadership. Research confirms that strong leadership is the second most influential factor for improving schools. The training will sharpen leadership skills that support proper implementation of strategies for school improvement. These practices will center around: establishing high expectations for all, create a climate that is conducive to learning, building leadership capacity, create a climate that is conducive to learning, cultivate leadership in others, improve instruction and student achievement, and manage people, data, and process.</p> <p>Schools: All Schools</p>	<p>Professional Learning</p>	<p>Tier 1</p>	<p>Monitor</p>	<p>08/16/2017</p>	<p>06/22/2018</p>	<p>\$20000</p>	<p>Title II Part A, Title II Part A</p>	<p>The district administrative team</p>

### Strategy 7:

21st Century Technology Intergration - Technology will be integrated across the curriculum in order to deepened and enhance the learning process. To accomplish this, the technology will support active student engagement, participation in student collaborative group, frequent interaction and feedback, and connection to real-world examples and experts. This integration will be achieved by making the use of technology part of a routine as it supports 21st Century curricular goals. Technology integration will enable students and staff to access online reading assessments and programs as well as appropriate reading and instructional materials.

Best Practice Strategies in Reading & Writing - The administrative team will gather information from Comprehensive Needs Assessment (CNA) to present to the staff on the various areas of weakness across the grade levels to decipher what internal and external factors contribute to the decline/incline in achievement. Teachers will build background knowledge, explicitly teach domain-specific vocabulary, provide students with opportunities for peer interaction, ask students to answer higher order thinking questions and develop their own HOTS questions. Teachers will model writing in the content of reading and expect students to write fluently about topics in reading. Teachers will provide students with graphic organizers, sentence stems and model the use of these in learning.

### Strategy 10:

Data-Driven Decision Making - In order to facilitate the achievement of all students, Cesar Chavez is committed to data driven instruction. The staff will implement a systematic ongoing process of continuous improvement by interpreting data, identifying the causality of learning difficulties, and determining how to best use the data to identify the instructional strategies to obtain the goal of 80% proficiency. The data sources utilized will include: formative and summative assessments, perception data, and standardized tests. This information will allow the making of informed decisions concerning both advanced students and students who need remediation. Teachers will progress monitor students using pre- and post-tests, and a student achievement data tracker to progress monitor student performance. The data team leader will help to facilitate and monitor the progress of student performance. The data team will do the following:

- Make data discussion a function of the cooperative learning teams (CLT) to analyze data in departments, content-area, and school-wide
- Design Data Walls
- Communicate Standardized Testing results to staff in a timely manner to drive instruction and students & parents to inform families of individual growth.
- Consistent use of formative and summative assessments

<p>The analysis of data through the instructional learning cycles will become a function of the department teams and will assist Cesar Chavez to have a more systematic approach to data driven decisions. This will be an ongoing process of continuous improvement; interpreting the data, identifying root causes and determining how to use the data to identify broad strategies and specific activities to foster our goal of 80% proficiency. These data analysis discussions are also the mode for analyzing data from strategy and activity implementation, as well as formative student achievement data to evaluate success and make adjustments if needed. The data discussion will use a variety of sources such as: classroom data, formative assessments, perception data, and benchmark tests. These will be used to make informed decisions concerning both advanced students and students who need remediation. Teachers will give a pre and post-test and use a student achievement data tracker to progress monitor student performance. The data discussion will help to facilitate and monitor the progress of student performance. Teachers will administer formative and summative assessments, which will allow the staff to make data-driven decisions regarding the learning needs of their students. This will be accomplished through collaboratively generated assessments both formative and summative. The formative assessments will provide teachers with immediate feedback on overall student understanding. The staff will receive training on the development of summative assessments, focusing on aligning the assessments with the curriculum and common core state standards. After this training, the staff will develop summative assessments in each subject area. The assessments will then be reviewed by the instructional coach. As we improve our systematic approach to data driven instruction, we will implement data walls to celebrate student success. The goal of the data wall is to build shared ownership, accountability, and awareness of progress toward school-wide goals and to reinforce positive messaging to school community for overall increased student achievement.</p> <p>Planned meetings to discuss data with general ed, special ed, paraprofessionals and support staff exists in many forms such as RTI, SIP, Grade level and Staff meetings. ### Strategy 1:

Alignment of curriculum, instruction, and assessment - The Quality School Improvement Plan (QSIP) has been revised to convey the intent of the leadership and guides the development, scope, alignment and evaluation of the written curriculum in all content areas. It also ensures quality control of the designed and delivered curriculum. The district will continue to implement the QSIP which will assist in aligning the curriculum to the common core state standards, structure the pacing guides and analyze the district assessment data. It also ensures quality control of the designed and delivered curriculum in conjunction with Saginaw Valley State University.

### Strategy 8:

Teaching the Common Core State Standards - In order to create accountability for students, teachers, administrators and the school, all staff will assist in the development of curriculum, cross-curricular units, lessons and activities that are aligned to the Common Core State Standards (CCSS), This will be accomplished by using a rigorous lesson planning model. This model will be used to translate the standards into learning. By focusing on continuous improvement, the staff will employ exemplary practices that will increase learning and achievement. Teacher will develop plans with key components that improve student learning through documentation of essential questions, Marzano's strategies, formative and summative elements, sequence of instruction and higher order thinking skills. The staff will:

- Clarify/Interpret the expectations of the CCSS in terms of knowledge, understanding, and skills.
- Develop common assessments that will provide evidence of student learning.
- Develop student learning maps that provide a focus for teacher planning and clearly communicate the expected learning to students.
- Develop lessons and units that incorporate research-based and exemplary practices to ensure that students learn what is expected.

In order for the staff to ensure that classroom lessons, assessments, and instruction are driven by the common core state standards, the staff will create student learning maps. These maps will be derived from the academy's standards driven curriculum. This process will clarify the standards into terms of what students need to know and be able to do in order to be successful at their grade level. The development of the student learning maps will provide a consistent access to the standards and the curriculum throughout the school. This activity will be monitored by the instructional coach, district coordinator of student learning, and the school leader and will be evidenced by the submission of student learning maps, along with lesson plans that follow them. This will require an online observation tool/app to record observations, transmit feedback, and generate data.

Data-Driven Decision Making - In order to facilitate the achievement of all students, Cesar Chavez is committed to data driven instruction. The staff will implement a systematic ongoing process of continuous improvement by interpreting data, identifying the causality of learning difficulties, and determining how to best use the data to identify the instructional strategies to obtain the goal of 80% proficiency. The data sources utilized will include: formative and summative assessments, perception data, and standardized tests. This information will allow the making of informed decisions concerning both advanced students and students who need remediation. Teachers will progress monitor students using pre- and post-tests, and a student achievement data tracker to progress monitor student performance. The data team leader will help to facilitate and monitor the progress of student performance. The data team will do the following: - Make data discussion a function of the cooperative learning teams (CLT) to analyze data in departments, content-area, and school-wide - Design Data Walls - Communicate Standardized Testing results to staff in a timely manner to drive instruction and students & parents to inform families of individual growth.

<p>The analysis of data through the instructional learning cycles will become a function of the department teams and will assist Cesar Chavez to have a more systematic approach to data driven decisions. This will be an ongoing process of continuous improvement; interpreting the data, identifying root causes and determining how to use the data to identify broad strategies and specific activities to foster our goal of 80% proficiency. These data analysis discussions are also the mode for analyzing data from strategy and activity implementation, as well as formative student achievement data to evaluate success and make adjustments if needed. The data discussion will use a variety of sources such as: classroom data, formative assessments, perception data, and benchmark tests. These will be used to make informed decisions concerning both advanced students and students who need remediation. Teachers will give a pre and post-test and use a student achievement data tracker to progress monitor student performance. The data discussion will help to facilitate and monitor the progress of student performance. Teachers will administer formative and summative assessments, which will allow the staff to make data-driven decisions regarding the learning needs of their students. This will be accomplished through collaboratively generated assessments both formative and summative. The formative assessments will provide teachers with immediate feedback on overall student understanding. The staff will receive training on the development of summative assessments, focusing on aligning the assessments with the curriculum and common core state standards. After this training, the staff will develop summative assessments in each subject area. The assessments will then be reviewed by the instructional coach. As we improve our systematic approach to data driven instruction, we will implement data walls to celebrate student success. The goal of the data wall is to build shared ownership, accountability, and awareness of progress toward school-wide goals and to reinforce positive messaging to school community for overall increased student achievement. Planned meetings to discuss data with general ed, special ed, paraprofessionals and support staff exists in many forms such as RTI, SIP, Grade level and Staff meetings. Teachers and support staff will analyze results for formative and summative assessments to plan and revise lesson delivery and strategies to determine what other materials or review is needed for the students' comprehension of material.</p> <p>Schools: All Schools</p>	Monitor	Tier 1		08/16/2017	06/22/2018	\$0	No Funding Required	School leader, instructional staff, instructional coach and district coordinator for student learning

### Strategy 2:

Alignment of curriculum, instruction, and assessment - The Educational Management Plan (EMP) has been revised to convey the intent of the leadership and guides the development, scope, alignment and evaluation of the written curriculum in all subject area. It also ensures quality control of the designed and delivered curriculum. The district will continue to implement the EMP, which assists in aligning the curriculum, structure the pacing guides and monitor the district assessment timeline. It also ensures quality control of the designed and delivered curriculum in conjunction with Saginaw Valley State University.

Research Cited: Research shows that students who succeed in rigorous course work such as Advanced Placement are developing college-level knowledge and skills while still in high school. These students are more likely than their peers to earn college degrees on time, providing an opportunity to save significant amounts of money. The College Board's 10th Annual AP Report to the Nation, released today, shows that state leaders and educators are making significant progress in expanding both access to and success in AP. Over the past decade, the number of students who graduate from high school having taken rigorous AP courses has nearly doubled, and the number of low-income students taking AP has more than quadrupled. Impressively, educators' work to bring more students into Advanced Placement courses has resulted in a larger increase in the number of qualifying AP Exam scores (the scores typically required for college credit) than in the number of low AP scores.

"At the heart of the College Board's mission is a commitment to ensuring that students have access to the opportunities they have earned," said College Board President David Coleman. "While great strides have been made over the last decade to expand access to AP, we remain as committed as ever to ensuring that every student with the potential to succeed in an AP course has the opportunity to take one."

**A Decade of Increased AP Participation and Performance**

Over the last decade, a broader, more diverse group of students has benefited from expanded access to Advanced Placement. In addition, more students than ever before are succeeding on AP Exams. Comparing the class of 2013 to the class of 2003 revealed the following: The class of 2013 achieved 1,000,135 more AP scores of 3, 4, or 5 (the scores typically accepted by colleges for credit and placement) and had an increase of 824,368 AP scores of 1 or 2. In other words, there was a greater increase from 2003 to 2013 in the scores of 3 or higher than in the scores of 1 or 2. 33.2 percent of public high school graduates in the class of 2013 took an AP Exam, compared to 18.9 percent of graduates in the class of 2003. 20.1 percent of public high school graduates in the class of 2013 earned a 3 or higher on an AP Exam, compared to 12.2 percent of graduates in the class of 2003. Low-income graduates accounted for 27.5 percent of those who took at least one AP Exam in the class of 2013, compared to 11.4 percent in the class of 2003. A total of 275,864 low-income graduates in the class of 2013 took at least one AP Exam during high school, which is more than four times the number of low-income graduates who took an AP Exam in the class of 2003. Since 2003, there has been a 7.9 point increase in the percentage of U.S. public high school graduates scoring a 3 or higher on an AP Exam, with 17 states exceeding the national average for this percentage change. Once again, Maryland led all other states in the percentage of its public high school graduates scoring a 3 or higher on an AP Exam. Though challenges remain, progress is being made to close equity gaps in AP participation and success among underrepresented minority students. Over the past year:

- 30 states made progress in black/African American representation among AP Exam takers and those scoring 3 or higher.
- 28 states made progress in Hispanic/Latino representation among AP Exam takers and those scoring 3 or higher.

<p>Data Analysis</p>	<p>The analysis of data through the instructional learning cycles will become a function of the department teams and will assist Cesar Chavez to have a more systematic approach to data driven decisions. This will be an ongoing process of continuous improvement; interpreting the data, identifying root causes and determining how to use the data to identify broad strategies and specific activities to foster our goal of 80% proficiency. These data analysis discussions are also the mode for analyzing data from strategy and activity implementation, as well as formative student achievement data to evaluate success and make adjustments if needed. The data discussion will use a variety of sources such as: classroom data, formative assessments, perception data, and benchmark tests. These will be used to make informed decisions concerning both advanced students and students who need remediation. Teachers will give a pre and post-test and use a student achievement data tracker to progress monitor student performance. The data discussion will help to facilitate and monitor the progress of student performance. Teachers will administer formative and summative assessments, which will allow the staff to make data-driven decisions regarding the learning needs of their students. This will be accomplished through collaboratively generated assessments both formative and summative. The formative assessments will provide teachers with immediate feedback on overall student understanding. The staff will receive training on the development of summative assessments, focusing on aligning the assessments with the curriculum and common core state standards. After this training, the staff will develop summative assessments in each subject area. The assessments will then be reviewed by the instructional coach. As we improve our systematic approach to data driven instruction, we will implement data walls to celebrate student success. The goal of the data wall is to build shared ownership, accountability, and awareness of progress toward school-wide goals and to reinforce positive messaging to school community for overall increased student achievement.</p> <p>Planned meetings to discuss data with general ed, special ed, paraprofessionals and support staff exists in many forms such as RTI, SIP, Grade level and Staff meetings. <p>Data Analysis</p>	<p>The analysis of data through the instructional learning cycles will become a function of the department teams and will assist Cesar Chavez to have a more systematic approach to data driven decisions. This will be an ongoing process of continuous improvement; interpreting the data, identifying root causes and determining how to use the data to identify broad strategies and specific activities to foster our goal of 80% proficiency. These data analysis discussions are also the mode for analyzing data from strategy and activity implementation, as well as formative student achievement data to evaluate success and make adjustments if needed. The data discussion will use a variety of sources such as: classroom data, formative assessments, perception data, and benchmark tests. These will be used to make informed decisions concerning both advanced students and students who need remediation. Teachers will give a pre and post-test and use a student achievement data tracker to progress monitor student performance. The data discussion will help to facilitate and monitor the progress of student performance. Teachers will administer formative and summative assessments, which will allow the staff to make data-driven decisions regarding the learning needs of their students. This will be accomplished through collaboratively generated assessments both formative and summative. The formative assessments will provide teachers with immediate feedback on overall student understanding. The staff will receive training on the development of summative assessments, focusing on aligning the assessments with the curriculum and common core state standards. After this training, the staff will develop summative assessments in each subject area. The assessments will then be reviewed by the instructional coach. As we improve our systematic approach to data driven instruction, we will implement data walls to celebrate student success. The goal of the data wall is to build shared ownership, accountability, and awareness of progress toward school-wide goals and to reinforce positive messaging to school community for overall increased student achievement. Planned meetings to discuss data with general ed, special ed, paraprofessionals and support staff exists in many forms such as RTI, SIP, Grade level and Staff meetings. Teachers and support staff will analyze results for formative and summative assessments to plan</p>	<p>Monitor</p>	<p>Tier 1</p>		<p>08/16/2017</p>	<p>06/22/2018</p>	<p>\$0</p>	<p>School leader, instructional staff, instructional coach and district coordinator for student learning</p>
